JEROEN NYCKEES

PERSONAL INFORMATION

Born in Brugge, Belgium, 4 September 1991

email jeroen.nyckees@gmail.com

website http://jenyckee.github.io

phone (M) 0032 496 43 18 77

address Kardinaal lavigeriestraat 20, 1040 Etterbeek

github http://github.com/jenyckee

SKILLS

Web Application development and data vizualization using node.js, React, d3.js, MapBox and Deck.gl

Computer graphics: shader programming in WebGL (glsl)

Sql an NoSql databases

Building cloud services using Amazon AWS

Machine learning using Python and R

Very eager to learn and motivated to work on interesting software

WORK EXPERIENCE

2017 - current Software engineer, Cronos — Brussels

Cronos

Web technology consultant at public education institution of the Flemish government (GO!). I contribute in the development and maintenance of ICT tools.

2016 - 2017 Software engineer, Komma Board — Antwerp

Komma Board

As a consultant at D-Studio (Mechelen) I developed a web application allowing architects to estimate and visualize in 3D (WebGL) real estate projects.

As a consultant at Rombit I helped developing a native application for a niche speaker manufacturer from Belgium that allows their users to control and play back music from within the app. Technologies involved were React Native and Web Sockets.

2015 - 2016 Software engineer, November five — Antwerp

November five

Development of web applications and animation heavy campaign websites for international clients such as New York Times.

2010 - 2014 Teacher, Educadomo — Brussel

Math teacher

Teaching math to children from 12 to 18. Helping with planning etc.

EDUCATION

2009-2012 Vrije Universiteit Brussel, Brussel

Bachelor of Computer Science

Profile : Software engineering

Bachelor thesis: Implementation of game theoretic analysis algorithms (in C++)

2012-2017 Vrije Universiteit Brussel, Brussel

Master of Computer Science

Profile : Web and Information Systems
Thesis subject: Distributed Multi-Touch User Interfaces for Modular Musical Expression

In the context of my master thesis I developed a framework that leverages the web browser to facilitate the creation, distribution and synchronization of processing sketches to music.

Covered Subjects

Object-Oriented Programming (SmallTalk, C++, Java, PHP)

Client side web frameworks (Angular x, Vue, React, Polymer)

Machine Learning (R, Python)

Data Vizualization (D3, WebGL, Processing, C#, JavaScript, C++)

Parallel Programming (Erlang, Clojure, Java)

Declarative Programming (Prolog)

Functional Programming (Haskell)

PROJECTS

Vizualization Belgian Federal Elections

For a university course group project we made a data visualization for the data collected in a national poll (De stemtest) by the Flemish Radio and Television broadcasting organization and the university of Antwerp. People were asked wheter they agree or disagree on political questions. This was then compared to the positions of the different political parties in Belgium. After contacting the university of Antwerp I was able to obtain the anonymized data. The visualization gave us insights on how the level of agreement to a certain party compared to the actual post election results.
Stemtest visualization

Vizualization Brussels Villo Bikes

For this project I collected data from the Brussels open data platform and made a visualization that shows over time how the bike stations are being used.
Villo visualization

Betreft: Aanbeveling Jeroen Nyckees

Beste heer, mevrouw,

Het afgelopen jaar heb ik het plezier gehad om met Jeroen Nyckees samen te werken in ons Web Development team. Wij bieden bij November Five een totaal oplossing aan onze klanten voor het vormgeven, ontwikkelen en onderhouden van digitale producten en diensten.

Als Front-end Developer was Jeroen verantwoordelijk voor uitvoering en opvolging van advertising solutions voor een internationale publisher. Jeroen heeft deze rol van goed vervult binnen November Five met de nodige zin voor kwaliteit en structuur. Hij zorgde ervoor dat projecten tijdig opgeleverd werden en de reviews van de designs van de klant werden verzorgd.

Ik zou Jeroen dan ook van harte aanbevelen als Developer voor projecten of producten waar experimentele technologieën betrokken zijn of de ruimte bestaat om in de diepte zulke technologieën uit te spitten.

Wij staan verder graag tot uw beschikking voor bijkomende informatie. Aarzel zeker niet ons te contacteren indien u vragen zou hebben.

Met vriendelijke groeten,

Stijn Symons
Technical Director

Reference Letter for Jeroen Nyckees

To whom it may concern,

As the promoter of the Master's thesis of Jeroen Nyckees, I had the chance to learn about his dedication to the chosen research topic as well as his superior technical skills and creativity. As part of his Master's thesis, Jeroen developed a framework for distributed multi-touch user interfaces for modular musical expression and got the very good grade of 15/20 for his Master's thesis. Jeroen Nyckees further followed my course on Web Information Systems where he proved to be an excellent team player in a group assignment that had to be executed as part of the course and demonstrated his detailed knowledge of the course content as well as his analytical skills in an oral exam, which finally resulted in a good grade for this course (14/20).

Based on my previous experience with Jeroen Nyckees, I can confirm that he is a fast learner and a motivated student. He has not only a deep knowledge of Computer Science, and Web Information Systems and Information Visualisation in particular, but also shows strong analytical and problem solving skills. Without hesitation, I can therefore recommend Jeroen Nyckees for future research positions in the domain of data visualisation and web information systems.

Sincerely,

Prof. Dr. Beat Signer
